1. INTRODUCTION

1.1 PURPOSE

This Software Requirements Specification (SRS) document details the functional and non-functional requirements for the TOURISMO Tour Booking System (TBS). It serves as a foundational blueprint for developers, system architects, project managers, and key stakeholders (Agency, Consultant, and Customer).

1.2 SCOPE

The TOURISMO Tour Booking System is a web-based and mobile-accessible platform that automates tour management, booking reservations, customer support, and payment processes. It streamlines communication between customers seeking tour packages, travel consultants managing reservations, and the overall agency managing packages and system rules.

1.3 OBJECTIVES

- Automate end-to-end tour package booking, cancellation, and payment processing.
- Provide tailored user roles for Agency Administrators, Travel Consultants, and Customers.
- Enhance operational efficiency and lower administrative overhead for travel agencies.
- Provide real-time reporting, inventory management, and communication channels.

2. FUNCTIONAL REQUIREMENTS

2.1 PRIMARY ACTORS OF THE SYSTEM

- **Agency:** The admin body responsible for defining tour packages, setting pricing schedules, overseeing consultants, and analyzing operational metrics.
- **Consultant:** The intermediary agent who assists customers, customizes tour itineraries, confirms bookings, and handles customer inquiries.
- **Customer:** The end-user who browses packages, requests customized quotes, books tours, and makes secure payments.

2.2 USE CASE DIAGRAMS

AGENCY

CONSULTANT

CUSTOMER

2.3 USER STORIES

AGENCY

AS A	I NEED TO	SO THAT I CAN
AGENCY	Log into the platform	Access admin features and manage operations securely
AGENCY	Add consultants	Assign team members to handle customer requests
AGENCY	Add packages	Offer new travel and tour options to customers
AGENCY	Manage notifications	Send updates and announcements to users
AGENCY	Analyse revenue	Track financial performance and earnings
AGENCY	Analyse customer reviews	Evaluate service quality and user feedback
AGENCY	Access location data	View location-based information for travel operations
AGENCY	Handle refunds and cancellations	Process customer cancellation requests and manage transactions
AGENCY	Manage customized plans	Review and tailor custom travel itineraries for customers
AGENCY	Provide final confirmation	Approve and verify customer bookings
AGENCY	Monitor overall activity	Oversee consultants, users, and overall site performance

CONSULTANT

AS A	I NEED TO	SO THAT I CAN
Consultant	Log into the portal using my credentials.	I can securely access system features and manage my account.
Consultant	Create and add new service packages.	I can offer standardized service options to clients.
Consultant	Build customized plans for clients.	I can address specific client requirements and tailored needs.
Consultant	Verify submitted documents.	I can ensure client compliance and accuracy of records.
Consultant	Use live chat and send reports to the agency.	I can communicate seamlessly and keep agency stakeholders updated.
Consultant	View the facility overview dashboard.	I can monitor facility operational status and resource allocation.
Consultant	Generate client invoices.	I can request payments accurately for provided services.
Consultant	Perform overall user verification.	I can validate user identity and manage access controls.
Consultant	Verify incoming client payments.	I can confirm successful transactions before fulfilling services.
Consultant	Register into the application by entering my details.	Make my data available to agency and use the system capabilities reserved for registered users.

CUSTOMER

CUSTOMER	Request refund and cancellation	Cancel my booking and claim eligible funds back
CUSTOMER	Use live chat	Contact consultant or agency for enquiries
CUSTOMER	Submit the tour review	Share feedback on my experience
CUSTOMER	View notifications	Stay updated on booking statuses and alerts
CUSTOMER	Add items to <u>wishlist</u>	Save preferred packages to view or book later
CUSTOMER	View history	Track past bookings and transaction activity

2.4 BUSINESS PROCESS DIAGRAM

3. NON-FUNCTIONAL REQUIREMENTS

These requirements ensure that the system performs efficiently, securely, and reliably while providing a good user experience.

1. Performance Requirements

- ◆ The system should respond to user requests within a few seconds under normal operating conditions.
- ◆ The application should support multiple users accessing the system simultaneously without significant performance degradation.
- ◆ Tour package searches and booking operations should be processed efficiently and accurately.
- ◆ The system should be capable of handling increasing user traffic and booking data.

2. Reliability Requirements

- ◆ The system should provide consistent and accurate services with minimal downtime.
- ◆ Booking, payment, and refund information should be stored reliably without data loss.
- ◆ The system should recover properly from failures or unexpected shutdowns.
- ◆ Backup and recovery mechanisms should be implemented to protect important data.

3. Security Requirements

- ◆ Users must log in using secure authentication methods.
- ◆ Customer data, payment details, and personal information should be protected from unauthorized access.
- ◆ The system should provide role-based access control for customers, consultants, and agency admins.
- ◆ Secure communication protocols should be used for online transactions and data transfer.
- ◆ The system should maintain proper records of user activities and transactions.

4. Usability Requirements

- ◆ The system should provide a simple, user-friendly, and attractive interface.
- ◆ Users should be able to navigate the system easily without technical knowledge.
- ◆ Error messages and instructions should be clear and understandable.
- ◆ The application should support easy access to booking, payment, and feedback features.

5. Availability Requirements

- ◆ The system should be available to users at all times except during scheduled maintenance.
- ◆ The application should support continuous online access for booking and customer services.

6. Scalability Requirements

- ◆ The system should support future expansion, such as adding more users, tour packages, and travel services.
- ◆ The database and server infrastructure should be capable of handling increased workload.

4. TECHNICAL REQUIREMENTS

1. Hardware Requirements

Server Side

- ➡ Processor: Intel Core i5 or higher
- ➡ RAM: Minimum 8 GB
- ➡ Storage: Minimum 500 GB hard disk or SSD
- ➡ Network: Stable internet connection with adequate bandwidth

Client Side

- ➡ Computer, laptop, tablet, or smartphone
- ➡ Minimum 4 GB RAM
- ➡ Stable internet connection
- ➡ Web browser support

2. Software Requirements

Operating System

- ➡ Windows 10/11

Web Browsers

- ➡ Google Chrome
- ➡ Mozilla Firefox
- ➡ Microsoft Edge

Database Management System

- ➡ PostgreSQL

3. Programming languages

Frontend

- ➡ HTML
- ➡ CSS
- ➡ JAVASCRIPT

Backend

- ➡ Python

4. Frameworks and technologies

- ➡ Bootstrap for responsive user interface
- ➡ React for front end development

- ➡ FastAPI for communication between frontend and backend systems

5. Compatibility Requirements

- ➡ The system should support desktop and mobile devices.
- ➡ The application should function properly across multiple operating systems and web browsers.

6. Security Requirements

- ➡ SSL/TLS encryption should be used for secure communication.
- ➡ Passwords should be stored in encrypted format.
- ➡ Secure authentication and authorization mechanisms should be implemented.
- ➡ The system should support secure online payment gateway integration.

5. CONCLUSION

The Software Requirements Specification provides a blueprint for building a scalable, reliable, and user-friendly TOURISMO Tour Booking System. By directly addressing the workflows of the Agency, Consultant, and Customer, the platform ensures streamlined operations and an enhanced tour reservation experience.
